

You want to make fossil-free aviation possible?

Norsk e-Fuel is a pioneer in the development of e-fuel projects in Norway. We are replacing fossil oil by turning what we have into what we need: converting CO₂ and water into renewable, synthetic aviation fuel. Founded in 2019, our partners had a clear vision: to drive the transition to renewable aviation. They brought together a powerful group of companies to bring us one step closer to a world without fossil fuels - from the aviation industry to technology providers, engineers and financiers, experts from all key sectors joined the journey.

And the team? We are disruptive thinkers, we are doers, we are dynamic visionaries, we are team players, we are inspiring leaders in a growing industry, we look out for each other and we never shy away from a challenge. We are here to make the vision a reality.

So is a great team, being part of the energy revolution of the 21st century and, above all, making a difference, what you are looking for? Then join us as

Specialist PtL Supply Chain & Logistics

Oslo/Remote | starting date: as soon as possible | fulltime | 2-5 years experience

Your main tasks

- | You work strategically with the management on offtake and the negotiation of long-term contracts of our product (renewable aviation fuel and renewable naphtha) and gaseous products (e.g. oxygen)
- | You develop and execute the strategy for product logistics together with the relevant blending and distribution companies and in close collaboration with the management
- | You are responsible for the product finding its best way to the customers (direct molecule delivery, book and claim models etc.) including the logistics of fuel handling and blending
- | You ensure product certification according to renewability standards, norms, and quality criteria
- | You support the team on the upstream supply chain building e.g., with CO₂ and other feedstocks

We offer:

- | The opportunity to fundamentally tackle climate change by working on the set-up of a new PtL economy and industry to decarbonize the transport industry
- | Close collaboration with market and technology leaders in the field of direct air capture (CO₂), electrolysis (hydrogen production), renewable energy project development and plant building

- | Access to external consultants and experts in the field
- | Flexible working hours and 30 days of vacation
- | An international and always supportive team
- | A modern and creative working space in downtown Oslo with the possibility for remote work. Here you will be part of an ecosystem with other sustainability tech start-ups and have access to an outstanding cantina with subsidized lunch.
- | A corporate culture of trust that provides room for creative and innovative solution-finding and various options for professional and personal growth
- | An opportunity for your work to have a real impact, on company strategy and our climate

Your profile:

- | You have a business degree and experience in the oil, chemical and/or refining industry
- | You ideally have experience in procurement contract negotiation and drafting
- | You ideally have insights into fuel logistics and blending processes
- | You love to challenge the existing fossil-oil-based value chains and want to introduce decentral produced synthetic fuels to the industry
- | You thrive in an interdisciplinary and dynamic environment
- | You are a creative problem solver able to build processes in a new and upcoming industry
- | You are self-driven, proactive, and persistent
- | You are fluent in English, Norwegian language skills are beneficial

Please send your application to career@norsk-e-fuel.com including:

- | Subject: Position you are applying for and full name
- | Cover letter & CV
- | Earliest starting date
